

ADMINISTRATIVE ORDER**No. 10**
Series of 2025**SUBJECT : GUIDELINES ON THE OPERATIONS OF THE DSWD
MOBILE COMMAND CENTERS (MCC)****I. RATIONALE**

The Philippines, located along the Typhoon Belt and within the Pacific Ring of Fire, is highly vulnerable to frequent natural hazards. According to the Department of Science and Technology (DOST) data, an average of 20 typhoons enter the Philippine Area of Responsibility (PAR) each year, and the country experiences approximately 100 to 150 earthquakes annually. Consequently, the Global Climate Risk Index 2024 ranks the Philippines as the 10th country most affected by extreme weather events, with significant weather-related losses sustained over the past 30 years.

Major disasters such as typhoons and earthquakes often disrupt communication lines and systems. During such events, efficient and timely communication becomes critical for effective disaster response and relief operations. When the transmission of vital information fails, emergency responders will have no information on the situation, making it difficult to assess needs and deliver appropriate relief to affected families.

To address this, the Department fulfills its mandate to provide reliable Information and Communications Technology (ICT) support for decision-making, responder coordination, and emergency management during disasters.

The Disaster Response Command Center (DRCC) serves as the central communication and information hub during disaster incidents. It is linked to the Regional Operations Center (ROC) and transmits critical field data through the Mobile Command Center (MCC), enabling near-real-time situational updates.

Strategically deployed in disaster-stricken areas, the MCC as an extension of the ROC is equipped with communication systems and technologies to bridge information gaps caused by infrastructure disruptions. The MCC is operated by the DSWD-Quick Response Team (QRT), utilizing satellite connectivity and communication tools to deliver crucial information.

Overall, the MCC plays a vital role in improving the effectiveness, efficiency, and coordination of emergency response operations. Its deployment supports

better-informed decision-making and ultimately leads to improved outcomes for disaster response and early recovery efforts.

II. LEGAL BASES

A. National Policies

Republic Act No. 10121 or the Philippine Disaster Risk Reduction and Management Act of 2010 - strengthening the Philippine Disaster Risk Reduction and Management System, providing for the National Disaster Risk Reduction and Management Framework and Institutionalizing the National Disaster Risk Reduction and Management Plan, Appropriating Funds therefore and for other purposes. This law provides the roles and responsibilities of the members of the NDRRMC as well as their counterparts at the regional, provincial, and city/municipal levels.

B. NDRRMC Issuances

1. **NDRRMC Memorandum Circular No. 04, s. 2025 or the Revised Guidelines on the Pre-Disaster Risk Assessment (PDRA)-Scenario Building** - reinstitutionalizing the process of conducting a comprehensive Pre-Disaster Risk Assessment-Scenario Building to proactively identify and evaluate potential risk and impacts associated with hazards, thereby informing and guiding effective disaster preparedness and response strategies.
2. **National Disaster Response Plan (NDRP) 2024** - a comprehensive, multi-hazard framework, designed to coordinate government, civil society, and private sector efforts for effective disaster management, focusing on saving lives and minimizing damage through data-driven decisions, technology integration, and anticipatory action. It builds upon previous plans to enhance the country's resilience to various disasters and the impacts of climate change.
3. **DSWD-DILG-DOH-DepEd Joint Memorandum Circular No. 2, Series of 2021: Guidelines on Camp Coordination and Camp Management and Internally Displaced Persons Protection** - covers all activities before, during, and after the displacement of families affected by natural and human-induced hazards. It also highlights the general policies that Sex and Age Disaggregated Data (SADD) of Internally Displaced Persons (IDPs) shall be maintained. Documentation and profiling of the individuals and families such as the number of children, older persons, lactating and pregnant women, and persons with disabilities inside the Evacuation Centers (ECs) shall be followed at all stages of its operation. Standards for reporting and recording of IDPs shall be followed.

4. **NDRRMC Memorandum Circular No. 11, s. 2015 or the Operational Guidelines in the Conduct of Joint Rapid Emergency Telecommunications Team (RETT) under the Emergency Telecommunications Cluster (ETC)** - strengthening the effectiveness and efficiency of ICT equipment during disaster response operations.

C. DSWD Issuances

1. **MC 024, s. 2024 or the Enhanced Omnibus Guidelines on Food and Non-Food Items and Logistics Management for Disaster Response Operations** - ensures that preparedness activities, specifically on the strategic prepositioning and management of FNIs, are institutionalized as the primary support of the Department.
2. **MC No. 05 s. 2024 or the Enhanced Disaster Response Operations Management, Information, and Communication (DROMIC) Reporting Guidelines** - provides standard procedures for gathering, data, submission, and dissemination of disaster response and early recovery operations monitoring reports.
3. **Administrative Order (AO) No. 17 s. 2023 or the Guidelines on the Operation of DSWD Disaster Response Command Center (DRCC)** - establishes the minimum standards in disaster operations monitoring, coordination, and reporting.
4. **AO 02, s. 2020 or the Enhanced Guidelines on the Deployment of the Quick Response Team (QRT)** - outlines the procedures for the deployment of DSWD QRT during disaster response operations and management.
5. **AO 03, s. 2015 or the Disaster Response Operations Guidelines** - defines the procedures for providing augmentation support and services to disaster-affected areas.

III. OBJECTIVE

This Administrative Order seeks to establish standardized guidelines governing the operations of the DSWD Mobile Command Center (MCC), ensuring effective, reliable, and timely emergency telecommunications, as well as seamless coordination among response teams, affected communities, and key stakeholders during disaster response operations.

Specifically, it aims to:

- A. Define the roles and responsibilities of the MCC Deployment Team;
- B. Facilitate the linkage between the DSWD MCC, the Response Operations Center (ROC), and the DSWD Disaster Response Command Center (DRCC); and

- C. Set the standard features and specifications of the MCC's ICT equipment.

IV. SCOPE AND COVERAGE

This Administrative Order shall apply to implementers of emergency telecommunications and Disaster Response Operations Management of Information and Communication (DROMIC) within the DSWD Central Office (CO) and Field Offices (FOs).

V. DEFINITION OF TERMS

- A. *Disaster* - refers to a serious disruption of the functioning of a community or society involving widespread human, material, economic, or environmental losses and impacts, which exceeds the ability of the affected community or society to cope using its own resources. Disasters are often described as a result of the combination of exposure to a hazard, the conditions of vulnerability that are present, and insufficient capacity or measures to reduce or cope with the potential negative consequences. Disaster impacts may include loss of life, injury, disease, and other negative effects on human, physical, mental, and social well-being, together with damage to property, destruction of assets, loss of services, social and economic disruption, and environmental degradation.
- B. *Disaster Response* - is the provision of emergency services and public assistance during or immediately after a disaster to save lives, reduce health impacts, ensure public safety, and meet the basic subsistence needs of the people affected. Disaster response predominantly focuses on immediate and short-term needs and is sometimes called "disaster relief".
- C. *DSWD Disaster Response Command Center (DRCC)* - is the 24/7 Disaster Operations Center of the DSWD. It serves as the central facility of the Department for disaster monitoring, coordination, reporting, and data/information management.
- D. *Emergency Telecommunications Cluster (ETC)* - is responsible for coordinating the deployment and implementation of communications, electronic, and information system support services for the identified Emergency Operations Centers (EOCs) and/or Incident Command Posts (ICPs) led by the Department of Information and Communications Technology (DICT).
- E. *Information Communications Technology (ICT)*¹ - the totality of electronic means to access, create, collect, store, process, receive, transmit, present, and disseminate information.
- F. *Quick Response Team (QRT)* - is a composite team of authorized DSWD personnel ready to be deployed to affected areas to assist/augment the affected FOs and/or Local Government Units

¹ As defined in RA 10844 or the Department of Information and Communications Technology Act of 2015

(LGUs) in delivering relief/humanitarian services to the affected families immediately after the onset of a natural or human-induced disaster.

- G. *Rapid Damage Assessment and Needs Analysis (RDANA)* - a disaster response tool that is used immediately during the early and critical state of a disaster, as soon as the conditions allow disaster survey teams to operate. Its purpose is to determine the life-threatening situation and life-saving needs of the affected population immediately after the disaster or emergency.
- H. *Regional Operations Center (ROC)* - a designated facility situated at the DSWD Field Office that is staffed and equipped with resources to undertake the department's coordination, manage information, and facilitate resource mobilization.

VI. OVERVIEW OF THE DSWD MOBILE COMMAND CENTER

Serving as a vital communication lifeline during disasters, the DSWD MCC is a specialized, fully equipped vehicle designed to provide emergency telecommunications capabilities. This mobile unit facilitates a direct and uninterrupted communication link between the affected LGUs, the ROC, and the DSWD DRCC, ensuring the reliable transmission, validation, and coordination of near-real-time on-the-ground data and information.

The MCC may function as an alternate ROC or command center if the primary ROC becomes inoperable or sustains significant damage (e.g., structural compromise of the facility, prolonged power outage without immediate backup, destruction of ICT and communication systems, flooding of the premises, fire or hazardous material contamination, or any condition that renders the facility unsafe or non-functional) as a result of a disaster.

A. Interoperability of the MCC with the DSWD ROC / DRCC

1. The MCC shall serve as a link on the ground in providing necessary data/information to the ROC of the FO and the DSWD DRCC at the CO.
2. The MCC Deployment Team shall coordinate and assist the concerned LGUs in strategizing the provision of telecommunications service through the MCC to ensure continuous and accurate reporting through the DROMIC-IS, in accordance with the existing DROMIC Guidelines.

B. Assets and Capabilities

The MCC is equipped with advanced communication systems (see figure 1) designed to address limitations or disruptions in telecommunications in disaster-affected areas. It serves as an interim solution for restoring connectivity and supporting coordinated response efforts on the ground.

Taking into consideration the dynamic nature of communication technologies, the ICT equipment in the MCC shall be evaluated

periodically and strategically integrated with advancements that enhance the operational effectiveness of the MCC. This will encompass the assessment of emerging technologies and integration of approved upgrades, ensuring the MCC remains at the forefront of disaster communication capabilities.

Figure 1. MCC Assets and Capabilities

Items	Capabilities	Services
Satellite Internet	• Lightweight, portable, and quick to set up and dismantle. • Flat High-Performance kit with a wide field of view and enhanced GPS. • Capable of maintaining stable connections while in motion or deployed in remote areas.	• Provides high-speed, low-latency broadband internet. • Enables real-time coordination via platforms like Viber, Google Chat. • Supports web browsing, email, and video teleconferencing in field operations.
UHF Digital Handheld Digital Radio	• Portable handheld device for maintaining contact with a central base station or repeater. • Operates on UHF frequencies with low power consumption.	• Enables instant voice communication and messaging within coverage areas. • Facilitates real-time field coordination and situational updates.
Point to Point Access	• Extends wireless connectivity in areas without fixed communication infrastructure. • Effective in rough terrain or disaster-stricken locations.	• Enables internet access for coordination tools (Viber, Google Chat, web browsing, email, video calls). • Supports stable field communication and information sharing.
Laptops	• Portable, durable, battery-powered computing devices. • Designed for mobility and field productivity.	Used for report writing, data consolidation, documentation, and real-time coordination.
TV/ Monitors	• Displays both video and audio content. • Supports external input from media devices and computing equipment.	Used for social media monitoring, news tracking, and visual presentation of situational data.

Items	Capabilities	Services
Generators Sets / Uninterruptible Power Supply (UPS)	• Backup power systems to sustain MCC operations during outages. • Ensures uninterrupted electricity supply.	Maintains continuous operation of all ICT equipment and communications systems during deployment.
Printer and Scanner	• Provides high-quality printing of reports and other essential documents. • Capable of scanning documents for digital storage and transmission.	• Facilitates reproduction and distribution of essential documents during disaster operations. • Enables quick digitization and electronic sharing of records, forms and/or reports. • Supports documentation and information dissemination needed in the field.

(Detailed information on specifications can be found in Annex A)

VII. OPERATIONAL STRUCTURE OF THE DSWD MOBILE COMMAND CENTER

A. Recommended MCC Deployment Team Composition and Corresponding Responsibilities

The MCC Deployment Team shall comprise at least six (6) authorized DSWD personnel; additional members may be included based on assessment and gravity of the operations.

1. **One (1) Team Leader from the Disaster Response Management Division (DRMD)** trained and recognized as a part of the QRT for Emergency Telecommunications (QRT-ETC) to supervise the overall operations of the deployment and MCC operations.
2. **Two (2) QRT-ETC from the Regional Information and Communications Technology Management Service (RICTMS)** licensed to operate radio equipment, and specialized and equipped with technical skills in ICT management, networking, electronics, and communications to address the needs of MCC. Additionally, proficient in basic repair of ICT equipment and shall perform the following duties:
 - a. Provide expertise in the installation, operations, and management of communications equipment, internet services, electronics, information systems, and other support services to the MCC Deployment Team; and
 - b. Conduct ICT equipment repair and maintenance activities as needed.
3. **Two (2) Trained QRTs** with orientation or training on the use of radio equipment and expertise in the following:
 - a. Gathering and management of disaster data or information, and utilization of the DROMIC-Information System (DROMIC-IS);
 - b. Collection, consolidation, and reporting of data or information on Food and Non-Food Items (FNI), Camp

- Coordination and Camp Management (CCCM), and Internally Displaced Persons Protection (IDPP);
 - c. Assessment of damage extent and identification of needs through Rapid Damage Assessment and Needs Analysis (RDANA); and
 - d. Coordination of requests in areas needing immediate augmentation or services.
4. **One (1) MCC Driver/Operator** with expertise in the maintenance of service vehicles and generator sets. In charge of ensuring the integrity of the vehicle before, during, and after deployment. Assess road accessibility and safety, perform troubleshooting/repairs, and maintenance.

In the event of a long-term deployment (exceeding 10 days), the MCC Deployment Team must be demobilized and replaced by a separate team. In such events, during the shift of the deployment team, the on-site teams must conduct a handover of operational control to discuss and coordinate operational details and ongoing activities for the deployment duration of the MCC Deployment Team.

To document accomplishments of the outgoing deployment team and turnover critical concerns that need to be addressed by the incoming deployment team, an MCC after duty report (Annex B) shall be accomplished by the outgoing deployment team prior to the handover of operational control.

B. Deployment Readiness

1. The Disaster Response Management Bureau (DRMB)/DRMD may conduct learning and development interventions on proper communication protocols, data generation, reporting, radiotelephone operations, and other relevant training, as required by the National Telecommunications Commission (NTC) for government radio operators and DSWD QRT-ETC.
2. The DRMD, together with the QRT-ETC, shall conduct quarterly simulation exercises or more frequently as deemed necessary, focusing on key MCC operational procedures to ensure the readiness of the MCC.

Further, the use of the MCC during nationwide drills such as the National Simultaneous Earthquake Drill can also be conducted to evaluate its effectiveness and identify areas for improvement in emergency response operations.

VIII. OPERATIONAL GUIDELINES

A. Triggers of Deployment

The MCC shall be deployed under any of the following conditions:

1. Activation of Blue Alert² or Level 2 Response Actions either at the NDRRMC or Regional DRRMCs;
2. When the Local or Regional RDANA or situational report indicates that existing communication systems in the affected area are severely disrupted or rendered inoperable, hindering coordination and information flow;
3. No contact within six (6) hours in areas potentially to be severely affected; or
4. For slow-onset hazards, where sufficient lead time allows for strategic pre-positioning, the MCC may be deployed pre-emptively upon activation of the Quick Response Team based on:
 - a. Official forecasts of an impending disaster based on the results of the N/DRRMC's Pre-Disaster Risk Assessment (PDRA)-Scenario Building; and
 - b. The need to establish communication and coordination capabilities in advance of a potential disaster, taking into consideration existing communication assets and capabilities available in the potentially affected area.

B. Pre-deployment

1. Planning and Coordination

a. Pre-emptive Deployment:

Based on PDRA-Scenario Building results identifying potentially affected LGU/s with limited communication, the FO will proactively coordinate with potentially affected LGU/s to establish supplementary capabilities prior to the onset of the hazard. This early engagement will prioritize MCC deployment factors: critical lifelines, accessibility, hazard susceptibility, and security of the MCC and Deployment Team at potential prepositioning sites.

The MCC Deployment Team, collaborating with LGUs, will develop concrete deployment plans, including potential routes and specific site/s within the identified LGUs.

b. Post-impact Deployment:

Post-impact, the FO will immediately coordinate with affected LGUs, using initial RDANA findings to prioritize areas with critical communication needs. Special attention will be given to LGUs that the Disaster Response Information Management Section (DRIMS) or Disaster Response Command Center (DRCC) has observed as being unable to submit timely or complete

² Under the National Disaster Risk Reduction and Management Council Operations Center Standard Operating Procedure, Blue Alert is a condition of stand-by readiness in preparation for a full-scale response operation; commonly done in the case of slow-onset disasters. At least 50 percent of human and material resources are made available for duty or deployment. The detection, tracking, monitoring, and results of pre-disaster risk assessment trigger this status.

reports, as this may indicate a significant communication breakdown. The MCC Deployment Team, in close collaboration with the LGU/s, will utilize pre-planned routes and sites identified during PDRA-Scenario Building, adjusting them based on the specific damage and needs outlined in the RDANA.

2. Briefing

- a. The DRMD shall lead the conduct of pre-deployment briefing covering roles and responsibilities, safety protocols, emergency procedures, and coordination mechanisms to ensure the team is fully prepared for deployment;
- b. Develop an alternative staffing plan to address unforeseen unavailability of personnel due to illness, emergencies, or other circumstances, subject to the approval of the Regional Director or duly designated authorized personnel, to maintain operational continuity; and
- c. Secure a travel order signed by the Regional Director or duly designated personnel authorized through a Special Order.

3. Vehicle and Equipment Inspection

- a. QRT-ETC, through a checklist (Annex C), shall lead in examining all ICT equipment and ensure that all communication tools are configured and tested for their functionality and completeness;
- b. The FO-AD shall check the integrity of the vehicle, its components, and generator sets, among others;
- c. Refill fuel tanks of the vehicle and generator sets and provide for extra fuel as deemed necessary prior to deployment to ensure operability of the equipment once deployed; and
- d. Ensure the vehicle is equipped with the necessary automotive and emergency tools, including jack, first aid kit, and basic repair tools.

C. Deployment

1. The QRT-ETC will unload, and carefully install and configure the satellite dishes, radio systems, and mobile hotspots to ensure internet access and a reliable telecommunication system.
2. Conduct an initial assessment of internet connectivity, specifically evaluating speed and reliability. If the assessed speed or reliability falls below the requirements of the QRT-ETC, inspect and adjust the alignment and configuration of the satellite dish.

3. Gather and validate data/information from the affected LGUs and evacuation centers.
4. Conduct RDANA (Annex D), which shall be transmitted to the ROC for immediate delivery of assistance/support.
5. Provide internet and communication equipment support services to:
 - a. The QRT conducting needs assessments inside and outside the evacuation centers;
 - b. The QRT providing technical assistance to LGUs in reporting disaster data/information through the DROMIC-IS; and
 - c. Disaster-affected populations situated at evacuation centers/GIDA, with support limited to internet connectivity on a scheduled basis.
6. The QRT-ETC shall regularly conduct assessments and monitoring of internet connectivity for speed and reliability. If any degradation occurs, the QRT-ETC will troubleshoot the equipment to restore optimal internet connectivity speed and reliability.

D. Post-Deployment

1. Demobilization

Demobilization of the mobile command center may begin if any of the following conditions are met:

- a. MCC serviced LGU/s show signs of Improved access to communication (i.e., restoration of telecommunication infrastructure);
- b. Completed collection of information, data, and/or disaster response operations; or
- c. Relocation to areas with a greater need for communication capacity augmentation based on assessment of the Field Office of the conditions on the ground.

2. Inspection of Equipment

- a. The QRT-ETC shall check all ICT equipment to prevent issues, damage, and/or loss, and prolong the life of the ICT equipment inside the MCC, ensuring the readiness of all ICT equipment for the next deployment.
- b. The MCC Driver/Operator shall thoroughly inspect all of the vehicle components, generator sets, among others, to maintain the overall excellent condition of the vehicle.
- c. The DRMD shall ensure the completeness of all equipment and components of the MCC through a checklist (Annex E).

3. Equipment Shutdown and Packing

- a. Shut down, return, and safely secure all equipment, including disconnecting the satellite internet, charging and storing radios, disconnecting all connections, backing up and

packing laptops, and carefully storing monitors/TVs. Ensure generators are turned off and UPS (uninterruptible power supply) units are stored properly.

- b. Perform a full inventory check to confirm that all equipment is accounted for and that nothing has incurred an issue, lost, or damaged during the deployment.

4. Post-Deployment Evaluation

- a. Before the MCC leaves the deployment area, the deployment team shall submit a copy of the MCC evaluation form (Annex F) to the target LGU. The LGU shall accomplish the evaluation form and submit the same to the MCC Deployment Team.
- b. In parallel, the deployment team shall accomplish the close-out report (Annex G), documenting information on the deployment area, a summary of activities during deployment, and challenges and recommendations.

E. Reporting

The deployment team shall consolidate the results of the evaluation of the LGU and submit the after-action report to the DRMB, documenting activities, area/s serviced, key observations, challenges, issues, gaps, and recommendations for future deployment within five (5) working days upon returning to the field office.

F. General Maintenance

A mandatory preventive maintenance schedule shall be implemented for all MCC units. This schedule shall include, but not be limited to, the following tasks performed at the specified intervals:

- 1. Daily (MCC Deployment Team):** During operations, conduct an inspection of MCC, which shall include a general check of the vehicle (fluid levels, lights, tires, brakes, battery, etc.), generator functionality, and ICT equipment.
- 2. Weekly (FO-AD):** Checking of various components and systems (fluid levels, lights, tires, brakes, battery, etc.) to ensure the vehicle is running smoothly and to prevent deterioration when not frequently used.
- 3. Monthly (FO-AD and RICTMS):** Servicing the generator, inspecting the vehicle's engine and transmission, and verifying the calibration of ICT equipment.
- 4. Annually (FO-AD and RICTMS):** Comprehensive inspection, including a safety inspection, and maintenance of the MCC to ensure its excellent condition.

IX. INSTITUTIONAL ARRANGEMENTS

A. DSWD Central Office

1. Disaster Response Management Bureau (DRMB)

- a. Provide technical assistance and/or resource augmentation as requested by the FO;
- b. Ensure sufficient funding for items necessary for the operationalization of all MCC units, such as but not limited to subscription to the internet, general maintenance, and any other operational costs; and
- c. Conduct review and evaluation of MCC operations to assess performance, identify lessons learned, and make improvements for future deployments.

2. Information and Communications Technology Management Service (ICTMS)

Provide technical assistance and/or training to the QRT-ETC on the usage of ICT equipment for MCC mobilization.

3. Administrative Service-General Service Division (AS-GSD)

Provide technical assistance to the FO-AD on general maintenance, annual registration, and insurance of the MCC vehicle.

B. DSWD Field Office

1. Disaster Response Management Division (DRMD)

- a. Lead the MCC Deployment Team at the regional level;
- b. Conduct briefing and orientation to the MCC Deployment Team on the ground situation before deployment to disaster-stricken areas;
- c. Gather feedback on the MCC operations from the LGUs;
- d. Submit report on the status of MCC to DRMB;
- e. Conduct review and evaluation of MCC operations to assess performance, identify lessons learned, and make improvements for future deployments; and
- f. Allocate funding for the general maintenance of the MCC.

2. Regional Information and Communications Technology Management Service (RICTMS)

- a. Pre-program all radios to the assigned disaster frequencies and ensure communications interoperability;
- b. Provide basic telecommunications coverage around the main operational area for the ROC or command center and to other responders;
- c. Provide technical assistance and/or training to the QRT on the use of ICT equipment for MCC mobilization; and
- d. Lead in establishing the connectivity between the ROC and DSWD DRCC through the MCC.

3. Administrative Division (AD)

- a. Provide additional logistics support such as fuel, oil, and toll fees during disaster operations;

- b. Assist DRMD with the repair and maintenance of the MCC vehicle; and
- c. Ensure annual registration and insurance of the MCC vehicle.

X. REPEALING AND TRANSITORY CLAUSE

All previous issuances contrary to or inconsistent with this Administrative Order are hereby repealed, modified, or amended accordingly.

XI. EFFECTIVITY CLAUSE

This Administrative Order shall take effect immediately upon issuance and shall continue to be in force until it is revoked. Let copies of this Order be distributed to all Offices in the Central Office and Field Offices for information and guidance.

Issued in Quezon City, Philippines, this 10th day of November 2025.

12 NOV 2025

ANNEX A

DETAILED TECHNICAL SPECIFICATIONS

A. Command Vehicle

A six-wheeled, 14-footer (rear cab), air-conditioned (front and rear cab), Custom-built motor vehicle for the specific function of Mobile Command Center.

- Overall Length/Width/Height - At least 6,500 x 2,400 x 2,400 mm
- Diesel Engine
- Type: 4-cylinder, In-line, Turbo Intercooler, Water Cooled
- Displacement: $\geq 4,000\text{cc}$ Diesel Engine
- Fuel Tank Capacity: ≥ 100 liters
- Emission Rating: Euro IV compliant
- Transmission: 6-speed, manual transmission
- Steering: Power-assisted; left-hand drive
- Safety: Equipped with Anti-lock Brake System with Exhaust Brake

B. ICT Equipment

a. LED TV / Monitor

1. Internet TV with built-in Web Browser
2. Built-in and Downloadable Application
3. Ethernet and Wifi Connectivity
4. Multiple port display
5. Wall mounted ready
6. HDMI Cable
7. Remote Control

b. Laptop Computer

1. 2.2 GHz, up to 5.0 GHz Speed Frequency
2. 12 Cores, 18MB Smart Cache
3. Windows OS 64-bit
4. MS Office for Corporate Application Perpetual and Business, Inclusive of Word Processor, Spreadsheet, Presentation & Email for offline use
5. 16 Gb DDR4 Memory , DDR4 - $\geq 3200\text{mhz}$ clock speed
6. Built-in keyboard
7. Touchpad with multi-gesture and scrolling function and inclusive of Standard Optical Mouse
8. All ports have INTEGRATED/BUILT-IN
 - USB 3.0 port
 - headphone/microphone or combo jack

- RJ-45 LAN port
 - HDMI
 - Type-C Port
9. 14" inch LED Display with a built-in webcam
 10. 512 GB HDD Memory capacity
 11. Integrated/built-in High Definition Audio system
 12. 1.6 kg. including battery, Battery at least 6 hours' operation with one full charge
 13. Integrated Dual Band Wireless - 802.11 ac/a/b/g/n; Bluetooth 4.0

c. Mobile Printer

1. Inkjet Printer
2. Print Resolution 600x600 dpi
3. USB Interface
4. 4 kg including battery
5. Printer Driver, Set Software

d. Portable Scanner

1. Sheet-fed Scanner
2. 200 dpi Optical Resolution
3. 100 pages Daily Duty Cycle

e. Transportable Satellite Terminal

1. Burstable internet speed of 100/20 Mbps download/upload
2. The satellite internet provider does not exceed 80ms latency using speedtest.net or testmyspeed.onl.
3. Unthrottled speed data allocation of at least 4TB
4. Satellite router that is WiFi 5-ready
5. Internet access anywhere in the Philippines, as long as there is no obstruction of the sky
6. Preloaded and can be requested for activation/deactivation by DSWD-authorized personnel.
7. 1 dedicated public IP address

f. Mobile Satellite Terminal

1. Usable at all times even if the vehicle is cruising at 80kph
2. Roof mountable/installable to a vehicle
3. Inclusive of power station with the following criteria:
 - Able to supply pure sine wave power to satellite terminal with at least 20 connected devices for at least 12 hours
 - Built-in universal AC outlet plug of at least
 - Continuous AC power draw of at least 2 kilowatts

- Included one pluggable battery pack with power of not less than 2kWH, the battery pack has the same brand as the power station.
 - The operational weight of the power station does not exceed 25 kg.
4. The battery has the following certificates:
- UL
 - CE
 - FCC
 - ROHS
5. Built-in PC charging ports:

Type	Quantity	Negotiable Maximum Output Power
A-female	2	100 watts per port
C-female	2	18 watts per port
Cigarette Lighter Port 1	1	120 watts (non-negotiable)

- The satellite terminal includes a roof-mountable GPS antenna module for real-time tracking of vehicle whereabouts.
- The satellite terminal has a burstable internet speed of 100/20 Mbps download/upload.
- The satellite internet service provider has at least 2 strategically located satellite gateways here in the Philippines with at least 1 satellite gateway located in a neighboring country.
- The satellite internet provider does not exceed 80ms latency using speedtest.net or testmyspeed.onl.
- The satellite terminal comes with a satellite router that is WiFi 5-ready.
- The satellite terminal has internet access anywhere in the Philippines, as long as there is no obstruction of the sky.
- The satellite terminal is preloaded with at least 6 months that can be requested for activation/deactivation by DSWD-authorized personnel.
- Unthrottled speed data allocation of at least 1TB
- With 1 dedicated public IP address

g. Wireless Access Point (Point to Point Radio System)

1. The radio frequency has a dual FCC-allocated license-free band at 5&60 GHz.

2. The Radio System can automatically use the 60GHz band as the primary link and 5GHz as the standby link.
3. The Radio System is less than 40 cm for the longest dimension and less than 3 kg for the operational weight.
4. The Radio System has a full duplex speed greater than 1.5Gbps & 800Mbps at 60GHz&5GHz in an unobstructed distance of 1.5km.
5. Inclusive of POE adapter
6. The antenna is designed for outdoor use and is capable of withstanding temperatures ranging from 0 to 50 degrees Celsius.
7. With a graphical user interface that is configurable via PC
8. Management VLAN support and VLAN pass-through
9. 128-bit AES encryption
10. 2.5 Gigabit full-duplex Ethernet port
11. Telescopic tool for alignment of signal

h. Digital Portable Two-Way Radio Repeater

1. The repeater is portable and can be mobilized
2. The repeater has a protective case to ensure the durability and mobility of the equipment.
3. The frequency range from 350 - 400MHz
4. Channel capacity of at least 64
5. Connectivity - Tx- RX and 1 Ethernet
6. Complete set of Antenna Systems e.g. mast cable, coaxial cable, TX, RX, antenna, and among others
7. Lightning arrest and grounding which is compatible with the system and equipment;
8. 2-KVA Portable Generators
9. With Uninterruptible power supply
 - Audible alarms alert you to operating environment changes and battery conditions. Some alarms are software configurable and most can be suppressed or delayed to eliminate nuisance alarms.
 - Automatic Voltage Regulation (AVR)
10. Automatically steps up low voltage and steps down high voltage to levels that are suitable for the equipment.
 - Cold-start capable
 - Provides temporary battery power when the utility power is out.
 - Generator compatibility
 - Allows you to recharge your battery while on generator power.
 - LED Indicators
 - Provide easy-to-read status of the unit and utility power conditions
 - General Specifications
 - Main Input Voltage - 230V

- Rated Power in W - 900W
- Rated Power in VA - 2300 VA
- Number of Sockets - 4 universal
- Battery Type - Lead-acid battery
- Recharge Time - 8 hours
- Battery Voltage - 24 V

i. Digital Portable Two-Way Radio

1. The two-way radio is a scalable mission-critical DMR-standard digital radio
2. The two-way radio is supported by a legacy analog technology.
3. The frequency range from 350 - 400MHz
4. 4 Watts transmission power
5. With desktop charger
6. Standard battery that can last for three (3) days on continuous talk time or five (5) days on standby mode when fully charged

Summary:

Equipment	Quantity
Smart TV	2 units
Laptop	2 units
Mobile Printer	2 units
Portable Scanner	2 units
Transportable Satellite Terminal	1 unit
Mobile Satellite Terminal	1 unit
Point-to-Point Radio System	1 pair
Digital Portable Two-Way Radio Repeater with Antenna Mast, Cable, 2kVA Generator Set and other accessories	1 unit
Digital Portable Two-Way Radio	8 units

C. Support

- a. Two (2) units of generator sets, 3KVA
- b. Two (2) movable computer chair
- c. Foldable seat (at least 5 capacity seater)
- d. Two (2) units of fire extinguisher, dry chemical, 10lbs

ANNEX B

MOBILE COMMAND CENTER AFTER DUTY REPORT

Disaster Occurrence: [Types of Disaster]

Date of Report: [Date]

Location: [Location of Deployment]

Deployment Period: [Start Date] – [End Date]

I. Summary of Activities

Activities	Details	For Follow Through
1. Monitoring	<i>Monitored the latest weather bulletin through the PAGASA, social media, and on Television.</i>	<i>Continuous monitoring of hazards and disaster events, and take actions as necessary.</i>
2. Coordination		
3. Report Preparation		<i>For updating the next duty team</i>
4. Others		<i>Follow through on the next duty team.</i>

II. Challenges and Recommendations

Issues and Challenges	Actions Taken	Recommendations

MCC PRE-DEPLOYMENT CHECKLIST

Type of Disaster: _____

Date: _____

Area of Deployment: _____

ICT EQUIPMENT

EQUIPMENT	CHECKLIST	YES	NO	REMARKS
Starlink	Are the accessories for standard actuated Starlink complete?			
	• Satellite dish			
	• Router			
	• Base			
	• Starlink Cable			
	• Alternating Current (AC) Cable			
	Are the accessories for Enterprise Starlink complete?			
	• Satellite Dish			
	• Router			
	• Base			
	• Starlink Cable			
	• Power Supply			
	• Ethernet Cable			
	• Router Cable			

	• AC Cable			
	Is the Standard Actuated Starlink Working?			
	• Powering On?			
	• Connecting to the internet?			
	Is the Enterprise Starlink Working?			
	• Powering On?			
	• Connecting to the internet			
Point-to-Point Access Radio System	Are the components of the Air Fiber complete?			
Air Fiber 60 Long Range	• Dish			
	• Main Arm			
	• Two (2) Stabilizer Arms			
	• Two (2) Flat Washers			
	• Two (2) Lock Washers			
	• Two (2) Flange Nuts			
	• Mounting Bracket			
	• Screw			
	• U-Clamp			
	• Gigabit PoE with Mounting Bracket			
	• Power Cord			
Radio	• Are there four (4 or 8) units of UHF Radio			

	(Handheld Radio)?			
	• Are the units of UHF working and fully charged?			
	• Powering On?			
	• Can receive messages?			
	• Can send messages?			
Repeater	Are the components of the repeater complete?			
	• Telescopic Antenna Mast			
	• Omnidirectional Antenna			
	• Lightning Arrester			
	• Cable with connector			
	• Jumper Cable			
	• Grounding Wire			
	• Grounding Clamp			
	• Grounding Rod			
	• Air Hose with connector Head			
	• Is the repeater working?			
	• Guy Wire fixing Ring			
	• Foot Pump			
Laptop	Are there two (2) units of laptops inside the MCC?			

	Are the laptops working properly?			
Printer	Are there two (2) units of printer inside the MCC?			
	Are the printers working properly?			
Scanner	Are there two (2) units of scanners inside the MCC?			
	Are the scanners working properly?			
Television	Are there two (2) units of television inside the MCC?			
	Are the televisions working properly?			
Portable Power Station	Is the ecoflow working?			
	Powering On?			
	Is it charging when it plugs in the AC Cable?			
	Can supply power output?			
Others

MOBILE COMMAND CENTER (MCC) NEEDS ASSESSMENT FORM

1. PROFILE OF THE DISASTER & MCC MISSION

1.1 EMERGENCY OPERATION

1.1.1 Name of Operation/Event : _____

1.1.2 Type of Disaster/Event : _____

1.1.3 Date and Time : _____

1.2.1 Region : _____

1.2.2 Province : _____

1.2.3 City/Municipality: _____

1.2.4 Barangay : _____

1.2.5 Sitio/Purok : _____

1.2.6 GPS Coordinate : _____

2. EVACUATION CENTER DETAILS

2.1 Is there an evacuation center in the community?

☐ Yes ☐ No

Type of evacuation center: _____

Name of evacuation center: _____

2.2 If yes, is there a designated camp manager?

☐ Yes ☐ No

Name: _____

Contact No.: _____

2.3 Inside Evacuation Center: Affected Families: _____ 2.3b Affected Persons: _____

2.4 Outside Evacuation Center: Affected Families _____ 2.4b Affected Persons _____

2.5 Affected children:

Age 0-6mos: _____	Age 7mos-2yrs old: _____	Age 3-5 years: _____	Age 6-12 years: _____	Age 13-17 years: _____
-------------------	--------------------------	----------------------	-----------------------	------------------------

2.5b PWD: _____ 2.5c Elderly: _____ 2.5d Lactating Mothers _____ 2.5e Pregnant Women _____

2.5f Others: _____

2.6 What are the existing protection mechanisms in the community, communal shelters, or evacuation sites for cases related to maltreatment or violence against these groups of people? [check all that applies]

☐ Security Patrols Organized by the Affected Population
 ☐ Police Presence / Patrols
 ☐ VAWC Desk
 ☐ Community Protection Groups
 ☐ BCPC Desk
 ☐ Women-Friendly Spaces
 ☐ Church Groups
 ☐ Child-Friendly Spaces
 ☐ Others _____
 ☐ No Protection Mechanism at all.

2.7 Please check the following if operational in the evacuation areas (Check all that applies):

☐ Lighting
 ☐ Ventilation
 ☐ Sleeping Areas with partition
 ☐ Separate Toilets/Baths for Male and Female
 ☐ Cooking Areas
 ☐ Separate Toilets/Baths for PWDs
 ☐ Washing Areas
 ☐ Camp Management Team
 ☐ Medical / Health Desk
 ☐ Police / VAWC Desk
 ☐ Marked breast-feeding Areas
 ☐ *Libreng Tawag* / Charging
 ☐ Others _____

2.8 Is the community/evacuation center accessible? ☐ Yes ☐ No

2.9 How can the community be reached? [check all that applies]

☐ Car or Bus
 ☐ 4WD or 6-10 Wheeler Trucks
 ☐ Motorcycle
 ☐ Foot
 ☐ Boat
 ☐ Helicopter
 ☐ Horse/cow/carabao

2.10 Are there road segments or bridges that are damaged? ☐ Yes, location _____
☐ No

2.11 If yes, please indicate details below
☐ Partially passable ☐ Totally Unpassable

3. PROTECTION

3.1 Are there cases (reported or not) of violence in the community as a result of the disaster or displacement?

☐ Yes, number of case: _____ ☐ No ☐ Do not know

3.2 If yes, type of case/s reported: _____

3.3 If yes, does case has been acted upon

☐ Yes ☐ No ☐ Do not know

3.4 If no, what are recommendation/s? _____

3.2 Presence of vulnerable people in the community/EC who need assistance:

☐ Unaccompanied/Separated MINORS/ORPHANS ☐ Unaccompanied/Separated SENIORS ☐ Sick ☐
PWD ☐ PWSN ☐ Pregnant/Lactating ☐ Child Headed ☐ Single Adult Headed ☐ Senior Headed ☐
Ethnic/IP

3.3 Is there an existing reporting mechanism for protection-related incidents?

☐ Yes ☐ No

7.4 Based on the current situation, please identify your most immediate need for protection essential services:

☐ Referral ☐ Police Presence
☐ Local Gov't. Official's Presence ☐ Social Services
☐ Counseling / Debriefing
☐ Others _____
☐ Replacement of identification documents

4. RELIEF ASSISTANCE (e.g. Family Food Packs, Family Kit, Sleeping Kit, Kitchen Kit, Water, Cash, others)

4.1 Has the community/EC received assistance? ☐ Yes ☐ No

ASSISTANCE GIVEN		SERVICE DATE		# of Families Served
PARTICULAR	QUANTITY	START	END	

4.2 If No, please list below the needed relief assistance

ASSISTANCE NEEDED		SERVICE DATE		# of Families Served
PARTICULAR	QUANTITY	START	END	

Which relief item should be prioritized? (Check all applicable relief assistance)

☐ FFPs	☐ RTEs	☐ Hygiene Kits	☐ Sleeping Kits
☐ Kitchen Kits	☐ Family Kits	☐ Modular Tent	☐ Sanitation Kits
Hot Meals (Mobile Kitchen Deployment)		☐ Others _____	

5. WATER SUPPLY

5.1 Is there access to water for drinking? ☐ Yes ☐ No
 5.2 Is there access to water for domestic use? ☐ Yes ☐ No

5.3 Based on the observed current situation, please identify your most immediate water needs.

☐ Jerry cans ☐ Bottled water ☐ Water Distribution/Delivery
☐ Water Purification Device ☐ Cash ☐ Others _____

OTHERS:

All assessments need to be relayed to other NDRRMC member agencies.

WAREHOUSE ASSESSMENT

Dispatched Welfare goods.

Recipient	Unit	Description	Quantity	Remarks

FNI Needs

Unit	Description	Quantity	Remarks

Recommendation to establish FFP production hub? ☐ Yes ☐ No
 Proposed site _____

Evaluation Form:
Internet Connectivity, Equipment, and Power Support through
Mobile Command Center (MCC)

Date:	
Location/Office:	
Respondent Name:	
Position:	

Section 1: Internet Connectivity

1. **How would you rate the reliability of internet connectivity provided in your area?**
 - ☐ Excellent
 - ☐ Good
 - ☐ Fair
 - ☐ Poor
 - ☐ Very Poor
2. **How often do you experience internet interruptions?**
 - ☐ Rarely
 - ☐ Frequently
3. **When issues occur, how quickly is internet service restored?**
 - ☐ Within minutes
 - ☐ Within an hour
 - ☐ Several hours
 - ☐ More than a day
 - ☐ Not consistently resolved
4. **Is the internet speed sufficient for your reporting?**
 - ☐ Always sufficient
 - ☐ Mostly sufficient
 - ☐ Occasionally insufficient
 - ☐ Rarely sufficient
 - ☐ Not sufficient at all
5. **Comments or suggestions regarding internet connectivity:**

Section 3: Equipment

1. **Do you have access to the necessary equipment (e.g., computers, printers, routers, etc.) to perform your tasks?**
 - ☐ Yes – All equipment is available and functional
 - ☐ Partially – Some equipment is missing or malfunctioning
 - ☐ No – Lacking essential equipment
2. **How would you rate the condition of your assigned equipment?**
 - ☐ Excellent
 - ☐ Good
 - ☐ Fair
 - ☐ Poor
 - ☐ Very Poor
3. **Are technical issues with equipment addressed in a timely manner?**
 - ☐ Always
 - ☐ Often
 - ☐ Sometimes
 - ☐ Rarely
 - ☐ Never
4. **Additional comments or suggestions regarding equipment support**

Section 3: Power Support

1. **How would you rate the stability of your power supply?**
 - ☐ Excellent
 - ☐ Good
 - ☐ Fair
 - ☐ Poor
 - ☐ Very Poor
2. **How often do you experience power interruptions?**
 - ☐ Rarely
 - ☐ Frequently
3. **Is there a backup power system (e.g., generator, UPS) in place?**
 - ☐ Yes – Fully functional
 - ☐ Yes – Partially functional
 - ☐ No – Not available
 - ☐ Not sure

4. **How effective is the power system in maintaining operations during outages?**

- ☐ Very effective
- ☐ Effective
- ☐ Somewhat effective
- ☐ Not effective
- ☐ Not applicable

5. **Comments or suggestions regarding power support:**

Section 4: Additional Feedback

Any additional concerns or recommendations related to the internet, equipment, and power services:

ANNEX G
MOBILE COMMAND CENTER CLOSEOUT REPORT
Disaster Occurrence: [Types of Disaster]

Date of Report: [Date]

Location: [Location of Deployment]

Deployment Period: [Start Date] – [End Date]

I. Introduction

Brief introduction of the situation which includes affected LGU, No. of affected population, no. of ECs etc.

II. Summary of Activities

Summary of activities conducted including the deployment location

- Configuration of network and software
- Documentation and inventory tagging
- Setup and Installation of the following ICT equipment:

<i>Item</i>	<i>Quantity</i>	<i>Status</i>
Laptop	2	Functional
Starlink	2	Functional

- Setup of MCC Vehicle and other equipment:

<i>Item</i>	<i>Quantity</i>	<i>Status</i>
Generator Sets	2	Functional
CCTV		Functional

III. Challenges and Recommendations

Issues and Challenges	Actions Taken	Recommendations

IV. Ways Forward
